

ADVOR NEWSLETTER

May 2019

More than 100 subjects have been enrolled in the ADVOR study!
Congratulations go to Jan Yperman Ziekenhuis, leper to include patient 100!

103 patients have been randomized

22 centers have been activated.

18 sites have included their first patient.

Please continue with the recruitment of subjects for the ADVOR trial. Only if each hospital recruits at least 1 to 2 patients per month we will be able to close the recruitment in November 2020.

Congratulations to Dr. Dierckx and her team for being top recruiter since last newsletter! The OLV Ziekenhuis, Aalst recruited 4 patients over the last 4 weeks!

Most important TIPS & TRICKS to facilitate the recruitment of NEW patients:

- Involve ER department to quickly identify potential subjects for the ADVOR study.
- Distribute contact details of the Study Coordinator (SC) within the hospital so potential patients can be notified to the SC who can initiate the next steps for the ADVOR study.
- Transfer an ADVOR subject to one specific ward where the nurses are aware of the study protocol.

**NEW Research Article in the European Journal of Heart Failure (2019):
Acetazolamide to increase natriuresis in congestive heart failure at high risk for diuretic resistance** (*Eur J Heart Fail.* 2019 May 9. doi: 10.1002/ejhf.1478)

Conclusion: Low dose loop diuretics + acetazolamide increases the natriuretic response to loop diuretics compared to high dose loop diuretics.

The ADVOR Team would like to thank everyone for their commitment and hard work. If there are questions concerning the ADVOR trial, do not hesitate to contact us.
